

ABOUT ME

I have no life and coding is my hobby — which means I'm way ahead of the curve when it comes to the latest technologies. I am an ambitious, versatile and enthusiastic person. I communicate effectively with both colleagues and members of the public. Able to use initiative to complete work to a high standard. Responsible and reliable, able to work alone unsupervised, but equally able to work as part of a team. Seeking new challenges, willing to learn new skills and can make a positive contribution.

SOFTWARE DEVELOPER

FRONT-END DEVELOPER / ANGULAR SPECIALIST

SOFTWARE ARCHITECT

INSTRUCTOR / MENTOR / CEO

Work Experience

Future Development Program Kft.

Remote

Sep 2021 - Present

Software Developer - Project Owner - CEO

- **Full-stack Development** (Angular 10-19, Typescript, HTML, SCSS, NodeJS, MongoDB, C#, Unity (2D, 3D))
 - Planning and implementing complex system architectures
- **Front-end Development** (using; Angular 10-19, TypeScript, HTML, SCSS, Tailwind, Unity)
 - Training Angular (teaching concepts, lecturing, mentoring, reviewing, GIT overview and setup)
- **Back-end Development** (using; NodeJS - TypeScript, MongoDB (+ Atlas), Express, SocketIO, Axios, PDFGen, NodeMailer, FS)
- **AI System Solutions**
 - Researching and developing various AI systems
 - Using and refining Hugging Face models
 - Using and integrating multiple different AI systems in one application, such as; Langsmith, OpenAI, Leonardo, Hyperhuman, Lightning, and more
 - Continuously learning and experimenting with AI models locally, beyond relying on existing solutions.
 - Using different types of AI models and tools, such as: text-to-text, text-to-image, image-to-text, speech-to-text, text-to-speech, function calling,
 - Created multiple Vector DB solutions
 - Using and developing AI tools that support development
- **DevOps Development**
 - Server configurations (Windows Server, Apache, Nginx, file sharing, etc.)
 - Networking configurations (Router, LAN, Network setup, etc.)
 - Docker environment configurations (with microservice architecture)
 - CI/CD workflow development
- **Multiple Different Contracts** through the years
 - Development of an oversized project (JavaScript, HTML, and CSS)
 - Cooperation with international team
 - Compliance with financial regulations
 - Drop-in as a firefighter to rescue a project that missed the deadline (Successfully) (Mobile App; Angular + Nativescript)
 - Getting to know the project and team quickly
 - Support a junior-only team
 - Plan and implement project-saving changes
 - Design and develop complete projects both singlehandedly and with a team (Angular)
 - Development using special security standards
 - Development using unique internal framework
 - Creating whole dynamic front-end system using Angular, based on a predefined code structure
 - Plan and estimate tasks
 - Manage tasks and team (using Jira, ClickUp, GitLab or GitHub)
 - Creating code documentation
 - Researching, stating and document best practices, and estimation processes
 - Developing a VSCode Extension
 - AI driven Document/Policy/FAQ relations bots

FUT.DEV.PRO.

Future Development Program Kft. (FDP)
Is my company, developing front-end and lightweight back-end solutions and also my ideas.

The main profile of the company is innovative software development solutions with Typescript, NodeJS and Angular technologies. (which we plan to expand with C# and Unity3D)
Our goal is to make software development easier and to create custom solutions easily, quickly, and simply.
The main goal of our innovative technologies is to make software development simpler and cheaper while the end result is a quality project.

You can learn more about FDP on:
<https://futdevpro.hu>

DYNAMO

I'm looking for a project assignment where I can use the set of components I've created; Dynamo: a dynamic set of Angular-Material components.

Which, of course, I will further develop on demand.

It can be a great advantage for start-up projects if the company does not have its own set of dynamic components.
This framework halves the development time, and keeps the functionalities stable.

Dynamo also has a back-end version with NodeJS, MongoDB and even more.

Using Dynamo on both sides of development makes a full-stack development extremely easy.

I'm working on a web application named Dynamo Builder, which makes the whole development process so easy that even people who don't understand development can make simple modifications or even complex developments.

You can learn more about Dynamo on:
<https://futdevpro.hu/projects/dynamo>

FUTURE DEVELOPMENT PROGRAM KFT.

📍 Budapest, Budatétény, 1223

Future Development Program Kft.

Remote

Sep 2021 - Present

- **Framework Development (Design, develop and document dynamic architecture frameworks for future developments)**
 - Dynamo-NGX (dynamic Angular-Material front-end framework, with lots of built-in features)
 - Dynamo-NTS (dynamic NodeTS-MongoDB back-end framework, also with lots of built-in features)
 - Dynamo-FSM (Dynamo full-stack-models)
 - Dynamo-CLI (ToolKIT for Dynamo systems to generate, convert and read code from the CLI)
 - FDP-Unified (ngx, nts and fsm) component kit for internal systems
- **Own Projects** (Design and develop multiple projects at the same time with own dynamic frameworks (mostly in 2022, and in my free time))
 - FutDevPro (company site)
 - Project management system
 - FDP-Auth (unified authentication service for all FDP services)
 - HelloCia (free to use dating app, for commercial purposes)
 - Full Dynamo architecture
 - Search algorithms
 - Dynamo Builder (web based application using Dynamo to plan and build web apps, for even easier web development)
 - WarBots (multiplayer Unity game, mainly for learning multiplayer concepts, but released)
 - Created a collection of code samples for Angular trainings and Dynamo projects
 - Multiple other projects in the planning phase (waiting for funding and others to finish)
- **Further Development of Myself**
 - Learning new ways to develop desktop applications with Unity and C#
 - Creating unique UI and HUD designs
 - Developing networking using Unity Mirror
 - Creating reusable Unity elements
 - Creating animations and effects
 - Designing complete game mechanics
 - Practicing AI prompting and using various AI systems such as Midjourney, Leonardo AI, ChatGPT, GitHub Copilot, Hyper3D, and more
 - Continuously learning about the legal and security aspects of AI systems
- **CEO Tasks**
 - Company management
 - Management of employees

Freelancer

Remote

Nov 2019 - Sep 2021

Freelancer - Lead Angular Developer

- Front-end development (Angular 8-10, TS, HTML, SCSS, SVG)
- Developing new and existing web-based apps and web pages
- Redesign of old solutions on an Angular basis
- Assist ongoing developments of web-based apps (development, design and architecture consulting)
- Training Angular (teaching concepts, mentoring, reviewing, GIT)
- Teaching front-end development (from the basics, HTML, CSS, JS, network basics, REST, GIT)
- Big-Data project front-end architecture and development
- Angular lead front-end tasks:
 - Planning front-end architecture by cooperating with back-end developments
 - Projection and review of development (GIT, Jira, Azure)
 - Design planning by cooperating with clients
 - Constantly developing teamwork methods

Fornax ICT KFT.

Budapest

Mar 2019 - Sep 2019

Work Flow Management System Developer

- Front-end development (Angular 6-8, HTML, CSS, Bootstrap, JavaScript, XML)
- Workforce- and Workflow Management System development
- All level implement of business processes
- Development acceptance procedure
- Contribute in business flow implementation regarding the Hungarian Telekom retail fault handling, and establishment business process
- Training Angular concepts

MY EXPECTATIONS

CONTRACTOR

Since I'm the CEO of my own company, I'm only available as a contractor.

REMOTE

I'm only open to full remote work. Of course, the period of familiarization with the team and systems, consultation with customers, and all other reasonable cases are exceptions to this. There may also be special cases — special contract terms — for which I am willing to let this expectation go.

AI GENERATIONS

I also have experience with AI generation tools like Midjourney for visual content and other graphic content, chatGPT for code or content generation AI system integrations, and many more.

I am constantly looking for new technologies and methods to improve my working methods and keep up with the rapidly evolving world.

(This CV is NOT AI generated)

SBP Systems KFT.

Budapest - Remote

Mar 2018 - Mar 2019

Lead Front-End Developer

- Front-end development (Angular 4-6, HTML, SCSS, Typescript, Material2, JSON, REST)
- Planning, designing and developing the UI of completely new systems
- Assign and supervise UI development team tasks
- Training of Front-end and Angular
- Meeting expectations and demands with the customers
- UI presentation and release
- Writing documentation

Fornax ICT KFT.

Budapest

Jun 2016 - Nov 2017

Work Flow Management System Developer

- Front-end development (HTML, CSS, Bootstrap, JavaScript, XML)
- Workforce- and Workflow Management System development (block programming)
- Low level implement of business processes
- Participation in development acceptance procedure
- Contribute in business flow implementation regarding the Hungarian Telekom retail fault handling business process

Education

Budapest University Of Technology And Economics

Vehicle Engineering – Automation

2013 - 2015
Unfinished (due to bureaucracy)
(Programming: C, C++, C#)

Civil Engineering

2011 - 2012
Unfinished (realized I can do more)

Vörösmarty Mihály High school

A-level equivalent high school education

2005 - 2009
(In drama department, where I learned to communicate effectively.)

Why me?

I love my job.

I have high expectations of myself and my work.

I learn quickly and am able to quickly pick up the thread on projects that are already running.

I'm polite and humble. I get along well with anyone.

I'm honest, I'm responsible, I understand the problems, I find possible solutions quickly, and can effectively translate it to lay people. (like customers)

I'm proactive and I treat all my work as my own.

Since I spend my free time coding as well, I gain significantly more experience than others in the same timeframe. As a result, I have twice the experience with the latest technologies compared to others.

No one has ever complained about me or my work. In fact, everyone has always been happy with my work.

My preferences

I like when I have an impact and when I'm needed. (I have a high standard)

I like flexible conditions, including both advantages and challenges. (I'm open to working more than 40 hours a week, or even on the weekends if needed. But I like to start the day *after* 10am.) Within my own authority I like to be in control of things. (Mostly because I like solving problems that others might avoid.)

Hobbies

Software development is also my hobby, so in my free time I'm developing my own projects, for example a game in Unity (WarBots; C#, NodeTS) or one of my company's projects (mostly Angular and NodeTS). (<https://futdevpro.hu/projects>)

I enjoy crafting-, repairing- and upgrading stuff, building robot or -automation, playing- and making computer games, playing role-playing games, writing, reading and meeting new people. Furthermore, philosophy is an important part of my life, as a religion.
